

View of direct-to-concrete application of EF-1990 to interior of a water storage vault utilizing plural component spray equipment.

EF-1990 can be applied as a standard solid lining material over surfaces such as new concrete or steel. However, should applications be required over extremely degraded surfaces such as deteriorated concrete with exposed aggregate, weathered wood with open seams or cracks, and pitted steel surfaces, EF-1990 can be applied using ECOSYSTEM[®] expansion technology.

View of EF-1990 applied as secondary containment lining system for hydrofluoric acid. EF-1990 was applied as an ECOSYSTEM[®] expanded film for sealing the rough concrete floor followed with a solid topcoat for added strength.
